DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 19-32 are rejected under 35 U.S.C. 102(b) as being clearly disclosed by Sasaki, (US 5,708,834) cited as prior art 6/5/02.

As per claim 19, 21-26, and 28-30, Sasaki teaches a method of managing a network comprising a plurality of network devices (server, 1, clients, Figs. 14 or 15), the plurality of network devices being connected to the network as a client or server, the method comprising:

establishing a communication channel between a first network device (server) and a second network device (one of the clients); (col. 7, lines 30-col. 9, lines 1-50)

transmitting from the second network device a predetermined signal that indicates information on at least one of a plurality of functions and operating status (operating state requesting means, 16 of the client, Fig. 1) of the second network device, to the first network device; (col. 11, lines 24-col. 13, lines 1-20)

receiving the predetermined signal at the first network device and notifying a user according to the information of the second network device; and

allowing the user (inherently the system administrator/operator, 65/85) to control an operation of the second network device from the first network device by utilizing the received information. (See Abstract, col. 2, lines 32-col. 6, lines 1-19). Further, as per claim 22, 23, Sasaki teaches wherein the notifying comprises displaying the information on a screen of the first network device and wherein the user can access and control the second network device using a web browser. (Note the operator 85, Fig. 15, col. 12, lines 5-67)

As per claim 20, Sasaki teaches wherein the predetermined signal is transmitted via a HTTP protocol.

As per claim 27 and 31, storing the information regarding the second network device; comparing the current information regarding the second network device with pre- stored information regarding the second network device; and displaying contents of the change in the second network device made based on the comparison result on the screen. (col. 11, lines 24-col. 13, lines 1-20)

Conclusion

The examiner requests, in response to this office action, support be shown for language added to any original claims on amendment and any new claims. That is, indicate support for newly added claim language by specifically pointing to page(s) and line number(s) in the specification and/or drawing figure(s). This will assist the examiner in prosecuting the application. When responding to this office action, applicant is advised to clearly point out the patentable novelty which he or she thinks the claims present, in view of the state of art disclosed by the references cited or the objections made. He or she must also show how the amendments avoid such references or objections. See 37 C.F.R.I .III(c).

In amending in reply to a rejection of claims in an application or patent under reexamination, the applicant or patent owner must clearly point out the patentable novelty which he or she thinks the claims present in view the state of the art disclosed by the references cited or the objections made. The applicant or patent owner must also show how the amendments avoid such references or objections.
